

Meta

Your Product Manager of Facebook Marketplace wants to understand how items are priced across cities.

Question 1: Can you find the average price of items listed in each category on Facebook Marketplace? We want to understand the pricing trends across different categories.

```
SELECT AVG(price), category
FROM Listings
GROUP BY category;
```

Your Product Manager of Facebook Marketplace wants to understand how items are priced across cities.

Question 2: Which city has the lowest average price? This will help us identify the most affordable cities for buyers.

```
SELECT city, AVG(price) AS average_price  
FROM Listings  
group by city  
order by average_price ASC LIMIT 1;
```
