As a Data Scientist on the Gmail User Experience Research team, you are tasked with understanding how users create and utilize email labels for personal organization....

Question 1: Can you find out the number of labels created by each user? We are interested in understanding how many labels users typically create to manage their emails.

```
SELECT COUNT(label_id) AS number_of_labels, user_id
FROM email_labels
GROUP BY user_id;
```

Question 2: Your team wants to know which labels had more than 5 emails assigned to them. Can you retrieve these?

```
SELECT label_id, COUNT(email_id) AS email_count
FROM emails
GROUP BY label_id
HAVING email_count > 5;
```

Question 3: For labels created in October 2024, determine the number of emails associated with each label. If any labels created in October did not have any emails associated with it, still return these labels in your output. This will help us understand the distribution of email usage across labels.

```
SELECT l.label_id, COUNT(e.email_id) AS email_count
FROM email_labels l
LEFT JOIN emails e
ON l.label_id = e.label_id
WHERE l.created_date BETWEEN '2024-10-01' AND '2024-10-31'
GROUP BY l.label_id;
```
